SUMMARY

Computer Science undergraduate focused on full-stack web development with experience in JavaScript, React, Next.js, Node.js, and SQL. Strong understanding of REST APIs, HTTP, authentication, databases, Git, and web application architecture. Experienced in building responsive applications, debugging frontend, backend, and API layers, and integrating third-party APIs.

EDUCATION

Indian Institute of Information Technology (IIIT), Sonepat Sonepat, Haryana, India
Bachelor of Technology in Computer Science and Engineering 2023 — 2027
CGPA: 8.15 / 10

TECHNICAL SKILLS

Languages: C++, Python, JavaScript (ES6+), TypeScript, SQL

Web: HTML5, CSS3, React.js, Next.js, Node.js, Express.js, FastAPI, Tailwind CSS

Databases: MongoDB, MySQL, PostgreSQL

AI & ML: Gemini API, Groq APIs, RAG, LLM Applications, Prompt Engineering, LLM Integration

Cloud & Tools: Git, GitHub, Linux, Docker, AWS, CI/CD, VS Code

Core Concepts: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, OOPS

PROJECTS

PLAY — AI-Powered Video & Social App GitHub · Live Jan 2026 — Apr 2026
MERN · Gemini API · Cloudinary

- Architected RESTful APIs for a full-stack video platform using the MERN stack, with a dual-token JWT authentication system using HTTP-only refresh cookies and automatic token renewal via an Axios interceptor.
- Engineered an automated video summarization workflow integrating the Gemini API and Cloudinary, offloading uploads to asynchronous processing for large media transfers.
- Designed multi-stage MongoDB aggregation pipelines to power 10+ community feed endpoints, joining and shaping data across multiple collections server-side.

FleetTrack — Real-Time Fleet Tracking & Delivery Management GitHub · Live May 2026 — Jul 2026
Next.js · TypeScript · tRPC · PostgreSQL · Prisma · Pusher · Leaflet · Docker

- Architected a full-stack, multi-tenant SaaS platform with type-safe APIs and authentication/authorization across three user roles, backed by a PostgreSQL/Prisma schema spanning six relational models.
- Built real-time fleet tracking with Pusher WebSockets and Leaflet, broadcasting live GPS updates across tenant-isolated channels backed by a five-stage state machine.
- Enforced multi-tenant data isolation with NextAuth JWT sessions and three-tier API middleware; validated authorization logic with 11 passing unit and integration tests.

AI-Powered Investor Decision Intelligence GitHub
Python · FastAPI · React · Qdrant · Docker · PostgreSQL · Gemini API

- Built a full-stack RAG platform that answers investor questions over annual reports with cited sources. PDF ingestion with chunking, embeddings, and SHA-256 deduplication feeds semantic retrieval and a local MiniLM cross-encoder reranker before answer generation.
- Built a KPI extraction pipeline with Gemini API and Pydantic validation, plus an evaluation harness with hand-verified datasets for retrieval, answer coverage, and KPI field accuracy.

EXPERIENCE

Software Development & Open Source Contributions
Remote
Self-Directed Projects; GitHub
2024 — Present

- Developed and deployed 5+ full-stack applications using React, Next.js, TypeScript, Node.js, and MongoDB to Vercel and Render, implementing RESTful APIs and authentication end-to-end.
- Containerized application services with Docker across 5+ projects.
- Tested and validated 15+ REST API endpoints using Postman; resolved integration issues that reduced API-related bugs by 20%.

ACHIEVEMENTS

Competitive Programming: Solved 700+ algorithmic problems across LeetCode, CodeChef, GeeksforGeeks, and HackerRank.

JEE Advanced 2023: Achieved All India Rank (AIR) 15,543 (top 6% of 250,000+ candidates).
